CERTAINLY A STRONG TEAM

heras_sks has emerged through the fusion of two companies which have long been renowned throughout Europe for the production of top quality gateway and fencing systems. By pooling all forces and experience, the company now offers suppliers, fencing engineers and customers additional advantages when it comes to delivery time, quality and price. The know-how and the technical production facilities enable heras_sks to comply directly with the concepts drawn up by planning engineers, builders and decision-makers. heras_sks – „the performance company“ – because it is performance that counts!

PROLIFE

The **PROLIFE privacy fence** combines the advantages of both metal and plastic.

The system is formed using strong and flexible strips of hardened plastic which are woven into standard hot dipped galvanised 200 mm x 100 mm twin wire mesh panels.

The simple but well thought out solution of the **PROLIFE privacy fence** offers many benefits over the traditional timber fence which is used for similar applications.

Its durable construction ensures the fence will not rot and therefore offers by far a greater life expectancy.

Virtually maintenance free it is therefore a highly cost effective option over its lifespan.

The more distinctive and attractive barrier will maintain its style and aesthetic appearance until long after the wooden fence has shown signs of deterioration

robust radiance

The materials used in the manufacture of the privacy strips is a specially designed plastic which is ISO certified for extensive use in the production of window frames. The constitution of the plastic is such that it can withstand the severest of fluctuations in temperatures.

longliving colours

The intensive depth of colours impregrated into the plastic ensure that it is highly resistant to UV rays ensuring the strips maintain their original colours for many years .

permanent protection

The surface appearance is also enhanced by its corrugated visual effect.

corner solutions

The plastic strips are woven into the mesh panels in our factory, the ends are heated and bent at 90 degrees around end wires to prevent removal.

comfortable flexibility

The **PROLIFE privacy fence** is available in a choice of heights and colours and due to its flexibility can even combine different colour coordinated schemes into the design.

variable steel cage fence

The twin wire mesh panels which form the framework of the fence come from the standard range which is supplied by heras_sks and variable heights are available. The mesh panels are always initially hot dipped galvanised after manufacture to ensure maximum life expectancy and can if required be then polyester powder coated in a variety of standard RAL colours.

The plastic Pivacy strips are available in a standard colour range which include.

White, Anthracite, Pale grey, and Moss green.

Other colour options may be available on request.
