## See the difference!

The Integra® cylinder is:

**lighter**  
**shorter**  
**more stable**  
**with a built-in regulator**

It is ideal for use in the workshop or on site and is particularly well suited for use with the latest generation of compact welding machines.

**So go on, make the change  
...to easier, safer welding!**

\*approx. empty weight

The Integra® cylinder has been awarded the internationally recognized TÜV Product Safety Test Mark.

## And there's more...

As well as the benefits of the Integra® cylinder, you can enjoy improved productivity, fewer rejects and a better working environment by welding with our new Maxx™ gases range.

**Ferromaxx®** For faster, cleaner welding of carbon steel

**Inomaxx®** Maximum performance for welding stainless steel

**Alumaxx®** One gas that does it all for aluminium

Also available in the Integra® cylinder:

**argon**

**Euro Mix M21** (industry standard argon / CO<sub>2</sub> mixture, conforms to EN439 M21)

## The Integra® Cylinder

**our  
innovation  
for safer  
welding**

*Smaller  
Lighter  
Easier to use  
Safer to handle*

*...and often  
outlasts  
conventional  
cylinders*

# *The Integra<sup>®</sup> Cylinder*

a revolution in welding safety

## Safer at work

- lower risk of cylinder falling, shorter and more stable than traditional cylinder
- reduced risk of regulator damage, regulator fully contained within protective guard
- reduced exposure to pressure hazard, built-in regulator controls pressure to 4 barg and cannot be removed

## Easier to use

- smaller, lighter and more manoeuvrable than traditional cylinder
- snap-on connection to cylinder (no need for spanners)
- hand-operated on/off valve (no need for bottle keys)

## Saves time and money

- never buy, repair or calibrate a regulator again
- gas economiser reduces gas consumption
- pre-set flow eliminates set-up time

### Contents gauge

Always shows how much gas is left, even when cylinder is not in use!

### Built-in regulator

Calibrated and maintained by Air Products, regulates outlet pressure to 4 barg. Incorporates residual pressure valve to prevent contamination of cylinder contents.

### Valve guard

With integrated handle, prevents accidental damage to built-in regulator.

### Quick-connect gas outlet

Allows direct connection to your welding machine.

### Gas economisers

Flow rates to suit your application. Connect direct to your welding hose and snap on to quick-connect gas outlet.
